The present invention describes isolated polynucleotide sequences (I), which encode polypeptides (II) with biological activity. Also described:

(I) a vector comprising (I); (2) an expression vector comprising (I); (3) a host cell genetically engineered to comprise (I) which is operatively associated with a regulatory sequence that modulates expression of (I) in the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4) in a semple; (9) producing the polypeptide of (4); and (10) a collection of polynucleotides comprising at least one of the polynucleotide sequences (I). The polynucleotides (I) can be used as hybridisation probes, coligomers or primers, for thromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA. The present sequence represents a human contig polypeptide sequence, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 periodontal disease; antiinflammatory; mouth disease; burns; injury; periodontal disease; antiinflammatory; mouth disease; burns; injury; peripheral neuropathy; Alaheimers disease; neuroprotective; nootropic; degeneration; parkinsons disease; antiparkinsonian; neurological disease; cerebrovascular ischemia; cerebroprotective; vasotropic; cardiovascular disease; autoimmune disease; immunosuppressive; immune disorder; viral infection; virucide; infection; cancer; cytostatic; neoplasm.

Novel human diagnostic protein #23990.

18-FEB-2002 (first entry)

```
The invention describes a new isolated polymucleotide (I) encoding a polypeptide with biological activity comprising: a nucleotide sequence of SEQ ID NOS: 1-567 (illy defined); a nucleotide sequence that hybridizes to the sequence of (i) under stringent hybridization conditions; or a nucleotide sequence of (i). Also described are: a(n) (expression) vector comprising (I); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polynucleotide in the host cell; an isolated holypeptide comprising a sequence of SEQ ID NOS: SeB-1134 (fully defined), where the polypeptide of sequence of SEQ ID NOS: SeB-1134 (fully defined), where the polypeptide of sequence of SEQ ID NOS: SeB-1134 (fully defined), where the polypeptide of (3) and a sequence of SEQ ID NOS: 1-567, a method for identifying a compound that binds to the collection of sequence of (3) in a sample; a method for identifying a compound that binds to the collection of sequences of SEQ ID NOS: 1-567. (I) is a polymeptide of (3); and a collection of polymucleotides, where the collection comprising any of the sequences of SEQ ID NOS: 1-567. (I) is a polymucleotide comprising any of the sequences of SEQ ID NOS: 1-567. (I) is a polymucleotide comprising of at collection, or folymucleotides, where the collection comprising of sequences of SEQ ID NOS: 1-567. (I) is a polymucleotide comprising of sequences and methods are useful in dagnostics, forensic, and gene mapping, in identifying of mutations responsible for genetic disorders or types of data and products dependent on DNA and amino acid sequences. The composition and method are useful for treating a disease or disorder. C e.g. osteoporosis, osteoporthritis, periodontal disease, burns, CNS and periodomne disorders, viral inferior, or cancer. This is the amino acid sequence of a novel polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polynucleotide encoding a polypeptide with biological activity, ful for treating a disease or disorder, e.g. osteoarthritis, burns, and peripheral disease, stroke, autoimmune disorders, viral

```
The invention relates to isolated polymucleotide (I) and polypeptide (II) caequences. (I) is useful as hybridisation probes, polymerase chain caedion (PCR) primers, oligomers, and for chromesome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed consists and in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a cupylypeptide in fissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders cupylypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations creponable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in celectronic format directly from WIPO at

Sequence 17, Application US/08448489

Parent No. 6184022

GENERAL INFORMATION:

APPLICANT: SEIKI, Motoharu

APPLICANT: SAINAGAWA, Akira

TITLE OF INVENTION: NOVEL WETALLOPROTEINASE AND ENCODING DNA THEREFOR

FILE REFERENCE: 55-290F

CURRENT APPLICATION NUMBER: US/08/448,489

CURRENT FILING DATE: 1995-06-07

NUMBER OF SEQ ID NOS: 19

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 17

LENGTH: 631
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INFORMATION

Sequence 18, Application US/09521220
Patent No. 6399348
GENERAL INFORMATION:
HITLE OF INVENTION: DNA SEQUENCES FOR MATRIX
TITLE OF INVENTION: DNA SEQUENCES FOR MATRIX
METALLOPROTEASES, THEIR PRODUCTION AND USE
              Patent No. 6114159
GENERAL INFORMATION:
APPLICANT: WILL, HORST
APPLICANT: HINZMANN, Bernd
TITLE OF INVENTION: DNA SEQUENCES FOR MATRIX
TITLE OF INVENTION: METALLOPROTEASES, THEIR PRODUCTION AND USE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              100.0%; Score 54; DB 2; Length 660; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             squence 6512, Application US/09949016
patent No. 6812339
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
FILE REFERENCE: CLOOL307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT FILING DATE: 2000-04-14
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-10-03
PRIOR PELING DATE: 2000-10-03
PRIOR FILING DATE: 2000-00-06
NUMBER OF SEQ ID NOS: 207012

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

2: uniprot_trembl:* Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- CATALYTIC ACTIVITY: Cleavage of gelatin type I and collagen types
IIV, V, VII, X. Cleaves the collagen-like sequence Pro-Gln-Gly-1-
IIe-Ala-Gly-Gln.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COFACTOR: Binds 4 calcium ions per subunit (By similarity).
COFACTOR: Binds 2 zinc ions per subunit (By similarity).
COFACTOR: Ligand for integrin alpha-V/beta-3.

BENUNIT: Ligand for integrin alpha-V/beta-3.

BEVELOPMENTAL STAGE: Persent in unfertilized eggs and at the zygote and cleavage stages. Levels increase at the blastocyst stage and with endoderm differentiation.

PTM: The propeptide is processed by MMP14 (MT-MMP1) and MMP16 (MT-MMP3) (By similarity).

SIMILARITY: Belongs to the peptidase M10A family.
                                                                                                                                                                                                        Mus musculus (Mouse).
